1. GLOSSARY OF TERMS

<u>Current account balance</u>	The current account balance includes i) foreign trade balance, ii) services balance, iii) primary income balance and iv) secondary income balance.
<u>Foreign trade balance</u>	Foreign trade balance is the balance of import and export operations of goods.
<u>Services balance</u>	Services balance is calculated based upon the balance of export and import operations on i) processing and repair, ii) transportation, iii) tourism, iv) royalty and licensing, v) telecommunication and communication, vi) construction, vii) insurance, viii) financial, ix) government, x) other business, xi) personal, cultural and entertainment services.
<u>Primary income balance</u>	Primary income balance is generated based upon the balance of revenue and spending operations on earned and paid factor income, including salaries, direct investment income, dividends, interest, rent and other items.
<u>Secondary income balance</u>	Secondary income balance is generated based upon the balance of revenue and spending operations on current transfers, including money transfers, humanitarian aid, grants, and other items.
<u>Capital and financial flow account</u>	The capital and financial flow account indicates the in- and outflow of capital to/from the country. Capital in- and outflow may be as i) direct, ii) portfolio, iii) trade credits and advances, iv) loans, v) currency and deposits, and in other forms.
<u>Capital account</u>	The capital account shows transactions with the rest of the world on non-produced non-financial assets (e.g., transfers of sportsmen), as well as other capital-oriented transfers (e.g., humanitarian aid in the form of equipment).

<u>Financial account</u>	The financial account records net foreign financial assets and liabilities and includes various investment flows, acquisition of financial liabilities and claims (direct and portfolio investments, loans, currency and deposits and others).
<u>Direct investments</u>	A direct investment is an investment by a resident of a country that entitles to exercise control over the management of an enterprise owned by a resident of another country.
<u>Oil bonus</u>	Premiums paid to the Republic of Azerbaijan with regard to the signing or implementation of Production Sharing Agreements in the oil and gas sector.
<u>Portfolio investments</u>	Portfolio investments are investments in securities made by a resident of a country without active participation in the management of an enterprise owned by a resident of another country to earn income. This item includes investments in securities not attributable to direct investments.
<u>Other investments</u>	Other Investments include i) trade credit and advances, ii) loans, iii) currency and deposits operations. Other investments not attributable to direct and portfolio investments and financial derivative instruments are included to this item.
<u>Trade credits</u>	Trade credits (debts) are amounts unpaid by residents in exchange for goods (or supplied services) provided by non-residents to residents, or amounts unpaid by non-residents in exchange for goods (or supplied services) provided by residents to non-residents.
<u>Trade advances</u>	Trade advances are amounts paid in advance (in part or in full) by residents in exchange for goods to be delivered (or services to be supplied) by non-residents to residents, or amounts paid in advance (in part or in full) by residents in exchange for goods to be delivered (or services to be supplied) by residents to non-residents.

<u>Loans</u>	Loans are money lent in a certain amount, with or without collateral, on the condition that it will be reimbursed in accordance with the concluded contract, for a certain period (with the right to extend the period) and on the condition that interest (commission fees) will be paid.
Currency and deposits	Currency and deposits are money deposited or transferred to current, savings (deposit), correspondent or other accounts, which are to be returned or transferred to another account at the request of investors (depositors) with or without payment of interest or commission fees under relevant contractual conditions, and cash foreign currency.
<u>Reserve assets</u>	Increase/decrease in country's strategic foreign reserves as a result of transactions in the current account and the capital and financial account. In practice, when the current account is in surplus, this surplus finances the capital and financial account deficit. If the current account surplus exceeds the capital and financial account deficit, the difference may increase reserve assets.
<u>Net errors and omissions</u>	Net errors and omissions may be generated as a result of operations not registered on corresponding items of the balance of payments. In practice, it is impossible to ensure that net errors and omissions are '0' in the preparation of the BoP. Experience shows that accurate registration of a number of transactions in liberal and open economies and on the backdrop of rapid expansion of foreign economic relations is a complicated process, due to incomplete information, time lag between information sources, deviations in assessments and other factors. In most cases, different sources of information are used to record credit and debit sides of a transaction. When one or more of these sources are incomplete, the credit and

	<p>debit sides of the BoP are not equal to each other, resulting in a certain gap. These gaps are summarized and recorded in the net errors and omissions section at the end. For example, if the surplus resulting from the gap between the balance of current account and the balance of capital and financial account flows in the BoP exceeds the increase in reserve assets, this gap should be recorded with a negative sign in the net errors and omissions section.</p>
