<sup>2</sup> Under the IMF's Balance of Payments Manual (6th Edition), the capital and financial account in the BOP structure is classified under the Assets/Liabilities principle, due to which table indicators are designed accordingly

## ***Direct investments***

The oil-gas sector accounts for 76.5% of \$4.1 B worth of FDIs.

*In 2018 rise in net financial liabilities (\$952.9 M) on the oil-gas sector of the BoP's direct investments item stems from the difference between attracted investments (\$4109.1 M) and capital repatriation (\$3156.2 M).*

Total amount of FDIs to the non-oil sector is estimated to equal \$967.1 M.

**Box 1.** The size, and structure of investments attracted to the Azerbaijani oil-and-gas sector, distribution of shares among investors with their further repatriation in the form of income and capital are being managed under international oil-and-gas contracts and recommendations of the IMF.

Repatriation of income under signed contracts is defined as the income a foreign investor earns from his/her investment. To note, under these contracts investors of relevant consortiums take back all of their investments to the Azerbaijani economy over the reported period in the form of extracted and exported crude oil (capital repatriation). In fact, this operation is the decrease in country's foreign liabilities in the financial account of the BoP ("-" net incurrence of liabilities).

## ***Credits and other investments***

Net financial assets on credits and loans increased by \$145.9 M, while net financial liabilities decreased by \$63.2 M. Net financial assets on credits and loans mainly increased at the expense of government guaranteed loans, and decreased at the expense of oil-gas sector loans, direct government loans, loans of firms and other enterprises and bank loans.

Net financial assets on deposits and cash decreased \$863.3 M, while net financial liabilities \$107.1 M.

## **Reserve assets**

Over the reported period country's reserve assets increased by \$3.5 B.

**Box 2.** The Reserve Assets item stands for increase/decrease in country's foreign exchange reserves resulting from operations in current operations and financial accounts. In practice, in the event of current account deficit/surplus, the deficit/surplus should be financed/covered at the expense of the surplus/deficit of the capital and financial account. However, if the current deficit/surplus is not fully financed/covered at the expense of the surplus/deficit of the capital and financial account, then this gap may be financed/covered at the expense of reserve assets (foreign exchange reserves). If total BoP deficit is not financed by reserve assets (or by contrast, the surplus is not reflected in the rise of reserve assets), the resulting gap is reflected as surplus in the 'Net errors and omissions'.
